

UNWANTED

by birds, butterflies, and native plants

BLACK SWALLOW-WORT

"THE DOG-STRANGLING VINE"

Armed with seed pods that look like chili peppers, shiny green leaves that come in pairs, purple star-shaped flowers, and grappling spaghetti-like roots, this invasive vine threatens monarch butterflies and songbirds and displaces native plant communities vital to insects, birds and other urban wildlife. Known to frequent chain-link fences, it is also found in woodlands and shrubs throughout Cambridge neighborhoods and is spreading fast!

Now that you know about it, you'll probably start to notice it everywhere you go. While it is difficult to dig it out completely because of its extensive roots, pulling green seed pods before they turn brown and open up is one important thing we can do to control this invader. Please dispose of pods in a tied plastic bag and put them in the trash. *Do not put pods into yard waste bags or in your compost!*

Start a Pod Squad on your block

For campaign buttons, flyers & clear plastic bags (for flyers & pods) to give to neighbors or hang on their doorknobs

Cambridge POD PATROL

Spread the Word... Not the Weed

Sponsored by

Fresh Pond Reservation Volunteer Stewards, CentersAndSquares.com,
Grow Native Massachusetts, Friends of Fresh Pond Reservation, & the City of Cambridge

BLACK SWALLOW-WORT

Leaves

Shiny, green, come in pairs, quickly winding around fences and shrubs

Flowers

Small, purple, star-shaped

Roots

White and fleshy tentacles that break off easily

Seed Pods

Pull when pods are still slim, smooth and green - before they open (in late July)

**Be careful pulling brown, papery pods that have already opened up - mature seeds easily escape!*

To prevent seeds inside pods from escaping and spreading to new areas: Pick the pods, put them in a tied plastic bag, and dispose of them in the trash. *Do not put pods into yard waste bags or in your compost!*

If you find black swallow-wort on your own property: Dig up the plant with entire root system, put it in a tied plastic bag and dispose of it in the trash. *Do not put black swallow-wort into yard waste bags or in your compost! The stoloniferous roots will sprout and seeds are not destroyed in composting operations.*

***Caution:** To avoid potential skin irritation, wear gloves when pulling pods or digging up plants.
